| SUBJECT: NEW I/O BOARD IMPLEMENTATION. | IMPLEMENTATION: 07-2016 |
|--|-----------------------------------|

We are implementing a new IO board ver. 4.xx. Production has started, it will be available as a spare part when current stocks are empty.

The new IO boards are compatible with ovens currently using the existing 3.xx I/O board.

The following will be the configuration in the future:

The Old I/O boards 30900065 + 30900015 will be replaced by one board only, with an additional board for gas ovens

This configuration will be implemented in Visual Cooking II Electric + Gas ovens and CombiSlim I+II ovens.

The new IO boards will be implemented into oven production from the following machine serial numbers:

Visual Cooking 16 06 67316

CombiSlim 16 06 C-12007

The two old I/O boards shown in the pictures to the right will be replaced with the new type I/O board.

Service bulletins are available for download from WWW.HOUNO.COM
HOUNÖ A/S - Alsvej 1 - 8940 Randers SV – Denmark.

New I/O board 30920103.

The wires connected to plug J15 and J16 on the old I/O board are now J1 and J2 on the new I/O board.
J15=J1 and J16=J2.

J17 is not in use on the old I/O board and therefore not connected on the new I/O board.

There is no programming of the new I/O board, it is a plug and play replacement.
